Positioning Statement:

"InfiKnit is a 3D-knitted acoustic ceiling system that seamlessly fuses artful design with high-performance acoustics — a ceiling that looks like art but works like a tile.

Essence: Architects no longer need to choose between bold design and acoustic performance.

EMOTIONAL PILLAR

Elevated Experience

- InfiKnit is about how a space feels.
- Focus on the serenity
- InfiKnit ceilings can make people feel calm, comfortable, and inspired under them.

Architect's Pride and Innovation

- Using InfiKnit makes architects feel they are on the cutting edge.
- It's an innovative solution they can be proud to introduce to clients ("Let me show you something new we can do with the ceiling...").
- InfiKnit as an award-worthy innovation
- The emotional reward is the architect's pride in pioneering a next-generation material that few others have used, and confidence that their design will stand out.

Trust & Peace of Mind

- Backed by Arktura/nOWN's proven expertise, thoroughly tested for safety and acoustics, supported by local reps for installation advice.
- "Rest easy – this system installs like a standard ceiling and meets all building codes, so you get creativity without risk."
- responsible, forward-thinking company – architects feel confident aligning with a brand that has integrity and technical clout.

FUNCTIONAL PILLAR

Durability & Maintenance

- panels are robust and low maintenance.
- Made of high-density polyester that won't fray or crumble – no fiber shedding like old mineral tiles." And "Colorfast and UV-stable dyes keep the ceiling looking vibrant over time."

Acoustic Performance:

- InfiKnit delivers true acoustic absorption.
- With an NRC up to 0.75 (with acoustic backer) , it is not just a pretty surface - it's a legitimate sound solution
- "Hushed conversations, peaceful lobbies – InfiKnit panels absorb up to 75% of reverberant noise , taming even the liveliest spaces."
- Highlight how this improves speech intelligibility in offices or reduces stress in classrooms (maybe cite how open-office noise impacts

Fire and Safety Compliance

- "Engineered for safety: InfiKnit's 3D polyester panels are fire-tested and rated (Euroclass rating depending on pattern).
- "Designed to meet international fire code requirements (certifications available), so you can design boldly without code worries."

Easy Installation (Grid System)

- Installs on standard T24 grid or suspension like any ceiling tile
- lightweight panels, modular size (1200x600mm) for quick coverage, and accessible for above-ceiling services.
- Field modifiability (trimmable per install needs) and accessibility (quick-release), the message is that InfiKnit is as practical as a drop ceiling, unlike custom installations that can be a nightmare to alter.

Sustainability Credentials

InfiKnit contributes to green building criteria: "No waste manufacturing, 100% recyclable

AESTHETIC PILLAR

Striking Visual Texture

- InfiKnit offers a rich palette of patterns and textures that simply aren't
  found in typical ceiling products.
- Message: "Ceilings that draw the eye – from delicate gradations to bold geometric knits, InfiKnit turns the overhead plane into a work of art."
- Emphasize the 3D nature: "intricate, depth-giving textures" and the interplay of light and shadow on the knitted forms.
- sculptural, fabric architecture, seamless pattern - InfiKnit is a design feature, not
  just a background element.

Contemporary & Premium Look

- InfiKnit as the aesthetic upgrade for ceilings.
- Signals a contemporary, forward-thinking design.
- Phrases like "modern elegance overhead" or "a ceiling that speaks to craft and technology" reinforce that this is a premium design choice.
- Unlike the cheap look of popcorn ceilings or generic tiles, InfiKnit gives a space a bespoke, high-end character.
- Clients walking in might assume it's a custom installation – that's the level of prestige it conveys.

Versatile Styles & Colors

- Whatever the project style, there's an InfiKnit solution. "
- Expansive color selection" is a listed feature – "Available in a wide range of hues from subdued neutrals to bold accent colors, to complement any palette."
- This pillar should make architects imagine the creative possibilities: coffers of knitted panels creating a geometric tapestry overhead, or a continuous knit ceiling that wraps down a lobby wall behind a reception desk.
- It transforms ceilings into a canvas.

Harmonious with Lighting and Other Elements:

- InfiKnit plays well with lighting design and other architectural features. "Open Knit, Open Plan: The panels maintain open plan accessibility – meaning you can integrate lighting fixtures or skylights without visual discord."
- "You can incorporate downlights or pendants between panels, or even backlight the knit for a gentle glow – the system is flexible to your vision."
- If the SoftCircuit pattern is meant to diffuse light or something, definitely promote that synergy of acoustic + lighting aesthetics.
- The goal is to show it's not a hindrance to other design elements but rather enhances them (e.g. lights shining through a lacy knit pattern casting patternedshadows).

	Emotional	Functional	Aesthetic
1	Confidence	Performance	Design Versatility
2	Empowerment	Compliance (fire, install, specs)	Seamless form
3	Human Comfort	Ease of specification	Textile-inspired texture
4	Human Comfort	Ease of specification	Textile-inspired texture
